WELCOME

Welcome to our 2022 Central Queensland bull sale. We are offering 72 2yo old bulls, a combination of ET concieved, AI bred and natural matings. They are genomic and fertility tested, independently structurally assessed and are in forward condition, ready for work.

As for many, the last two years have been a enormous for us, fantastic seasonal conditions, booming commodity prices and of course Covid 19. They have been highlighted by four events, the sale of a half share in Murdeduke Quarterback Q11 for a then record price ($120000) for a yearling Angus bull, secondly a wonderful Central Queensland sale which saw a complete clearance averaging $14296 and finally the success of two Murdeduke Matrons sales which have seen the complete clearance of over 200 females topping at $31000 for Murdeduke L123 to Black Star Angus in 2021 and $28000 for Murdeduke K304 (Quarterbacks grand dam) to a syndicate of three studs which included Merridale, VIC, Crawford Angus, NSW and Little Meadows, WA.

$31000 Murdeduke Jedda L123

The Quarterback story just continues to gain momentum on the back of wonderful calf reports, the maturity of the bull, his exceptional EBV package, great structure and phenotype. Although he is a heifers calf, he still managed to be one of the heaviest and "pick" bulls in the drop. His strength comes from the engine room of herd the Barunah family which features CSWK304 and CSWU25 two of our very best performed matrons.

Murdeduke Quarterback Q011 October 2021

Both Matrons sales saw a complete clearance with females being sold to five states. As hard as it was we sold some of our most highly credentialled cows Jedda H200, Jedda L123, Panda D40, Jedda E175 (dam of renowned ABS high fertility sire Murdeduke Kicking) and Barunah K304 (the grand dam of boom sire Murdeduke Quarterback Q11 and dam of Sterita Park stud sire Murdeduke Nightrider). They have been the backbone of our herd and sold with our highest recommendation.

Murdeduke's herd was founded on trusted, reliable, high performance sires like the Te Mania sires Emperor, Ada, Africa and Unlimited, Ardrossan A241 and Admiral, Rennylea Edmund, Millah Murrah Klooney , Kenny's Creek Eclipse, Milwillah Gatsby and Coonamble bulls Elevator and Hector. Recently Emperor sired flush brothers Hussar and Kicking have continued our journey, giving us a lift in many traits. Murdeduke Kicking leads the way on the fertility front on the back of his Platinum status in ABS's High Conception Rate Program which has seen him deliver up to 15% above average conception rates.

Stud Sire Murdeduke Kicking K428

In a quest to maintain our momentum we are pleased to report the recent purchase of three stud bulls. Te Mania Pheasntry P1479, a super high marbling and EMA bull, Pathfinder Phat Cat, a well muscled, thick topped sire and Rennylea Prospect P550, a Rennylea L519 son offering calving ease, carcase and phenotype. Prospect and Phat Cat having been signed by Agri-gene, along with Murdeduke Kicking signed with ABS and Coonamble Nic Nat signed with Agrigene gives us four semen sires to use in our herd as backup bulls which should help secure genetic gain.

Stud Sire Coonamble Nic Nat N439

The Stud herd is run in conjunction with extensive prime lamb and cropping enterprises. A free range piggery, which is the home to the branded pork brand Otway Pork, can also be found at Murdeduke.

Competiton between the enterprises ensures that commercial drivers help determine our breeding principles.

Murdeduke's Breeding Objectives

Our breeding objectives are designed to provide genetics that deliver efficient, easy calving cows and calves that stack weight on quickly and make processors grin when they see the quality of them.

"The unseen bonus our bulls provide is an ability to improve carcass performance and fertility without sacrificing type."

In our quest to supply superior animals we not only collect all required breed plan data and have our cattle independently structurally assessed annually but we ensure that nutrition is not compromised in our moderate rainfall environment. By managing nutrition and rumen function for optimal performance year round our bulls express their potential without compromising joint and bone development which can be the case with short term sale preparations.

To unlock the potential of Murdeduke's quality assurance program we encourage producers to also adopt cutting edge animal nutrition and management techniques. Early rumen development and appropriate animal health measures ensure calves maximize their performance on farm and hit the ground running when they enter a feedlot.

Our Breeding Objectives Deliver at Beef 2021

Beef 2021 saw our breeding objectives deliver on the big stage. Gippsland client, Barry Hollond won three sections of the carcase competition firstly at the preliminary state level and then at Beef Australia 2021's national level including the Meat Standards Australia's national Award for the Highest Indexing Carcase. Emperor for an Australian record price of $91,000.

Barry Holland and Lachie Wilson celebrating Barry's Beef 2021 win.

The national MSA Index Award for the highest indexing carcase was hotly contested competition with some 3.5 million carcases graded, with Mr Hollonds Angus steer carcase coming out on top. To top it off the steer was grass finished.

Barry also won two state classes with Murdeduke blood steers in the pasture fed pen of three dressed steers 260 to 340 kilograms and 300 to 420 kg export chiller classes. These entries placed 5th and 6th respectively nationally.

Barry joins growing list of Murdeduke clients achieving success in carcase competitions around the country.

Genetics

Bloodlines featured in the herd over the next few years include Millah Murrah Paratrooper, Murdeduke sires Hussar and Kicking, Rennylea L519, Beast Mode,Varilek Geddes, 38 Special and Millah Murrah Quixote. Bulls used to ensure calving ease is maintained in the herd include, our newly acquired stud sire Te Mania Pheasantry, Sitz Stella, Rennylea Prospect, Coonamble Nic Nat, Landfall New Ground and Chiltern Park Moe.

The most exciting news we have is the introduction of Murdeduke Quaterback and Millah Murrah Rembrandt and Rocket Man into our breeding program. Quarterback, Rembrandt and Rocket Man epitomize the modern Angus providing calving ease, growth, fertility and great carcass merit.

Murdeduke's Client Services

Murdeduke is situated 1.5 hours South West of Melbourne just off the Princes Highway at Winchelsea. Our client base stretches from Tasmania, to the SE of South Australia to East Gippsland to as far north as Julia Creek in Queensland.

We hold an annual bull sales in March (Winchelsea) and August (Rockhampton) and have a large selection bulls for private selection all year round. This year we are holding an inaugural Spring sale in Victoria on the 7th of September.

Semen for both commercial and stud purposes is freely available from our leading sires.

As part of our service we value the opportunity to visit clients on their properties as it gives us an insight into their production systems and how our cattle may be fit into them.

SALE DETAILS

MONDAY
29 AUGUST 2022
PREVIEW TIME
10AM
SALE TIME
1PM

Pre-Sale Inspection

The bulls are running at Raglan Station, 10 minutes off the Bruce Highway at Raglan. Inspections prior to sale day can be organised, by appointment, by contacting either Georgie Connor and Mark Scholes The bulls will be penned at 10am ready for your inspection on sale day. **Photos available online from mid August. See www.stocklive.com.au**

Method Of Selling

The bulls will be run through the ring at Gracemere and will be sold at auction under Queensland auction conditions. The auction will be simulcast live allowing for bidding online.

Warranty

The Bulls have been independently assessed for structural and reproductive soundness, as result we believe they are ready for work. If, during the first 18 months, a bull becomes infertile or breaks down due to reasons other than injury or disease contracted after leaving Murdeduke we will :-

- Provide you with a satisfactory replacement or issue you with a sale credit for the purchase price of the bull on a pro-rata basis less any salvage value.

We strongly suggest that you observe your new bull when he is first introduced to the cows and if you have any concerns please don't hesitate to call us.

Health

The Murdeduke herd has a Johne's score of J-Bas 7. The Bulls have been blooded and undergone full 7 in 1, Pestiguard and Vibrio vaccination programs although we recommend booster shots on an annual basis. The bulls have been vaccinated for 3 Day. The Bulls are HGP free and have not been fed Animal By-products.

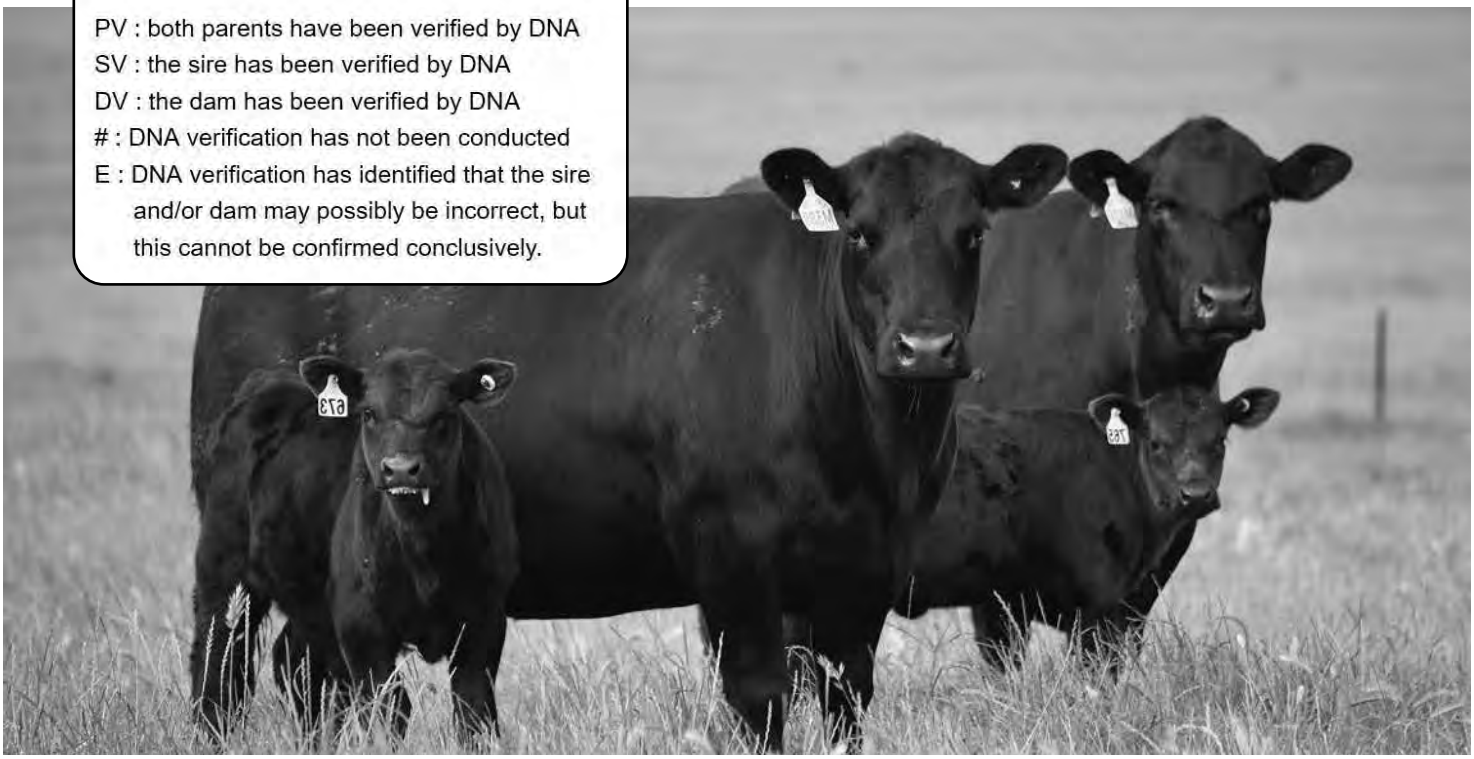
Please Note: The bulls have undergone a pre-sale examination by Dr. Alyssa Bischoff, Rocky Repro. The examination involved the palpation of the testicles, exteriorisation and visualisation of the penis and a visual appraisal of general well being. A crush side semen test was conducted. All the bulls were found to be in excellent general health and fertility.

DNA Testing

Genomic testing has been conducted on the sale team allowing us to provide you with enhanced EBV's. The bulls have also been tested for genetic disorders with their status being identified. BVDV scanning showed no PI's in the team. The catalogue carries a Sire Assured status being sire verified but not dam verified so we don't guarantee the parentage of the bulls.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA
SV : the sire has been verified by DNA
DV : the dam has been verified by DNA
: DNA verification has not been conducted
E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.



Health and Safety

Under normal circumstances our bulls are placid and quiet however care must be taken when inspecting the bulls as crowd pressure can alter their behavior. Please don't crowd the bulls and ask for assistance if you would like a closer inspection. Visitors enter the cattle pens at their own risk. No Children are allowed in the pens. **Covid Precaution. Remember to Social Distance**

Selling Agents

Elders and SBB will conduct this year's sale. The auction will e simulcast live and bidding accepted through Stocklive's viewing platform allowing for bulls to be inspected prior to sale nd bid on from the convenience of your office.

A rebate of 3% is allowed to agents nominating and accompanying buyers to the sale. **Nominations must be made by 4pm the day prior to the sale, with settlement being made within seven days to be eligible for the rebate.**

Notes: Broken Bow did a great job for us some 10 years ago so we jumped at the opportunity to use Geddes, a stronger more powerful version of Broken Bow. Geddes hasn't disappointed delivering a run of thick, meaty, cleaned skinned calves with good structure and disposition. His outcross pedigree is a bonus.

UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes. For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Calving Ease	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
	EMA	cm^2	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
	RBY	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
Feed/ Temp.	NFI-F	kg/ day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more desirable foot angle.
	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate more desirable claw structure.
Selection Index	$A	$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	$A-L	$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems. The $A-L index is similar to the $A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the $A aims to maintain mature cow weight, the $A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

BRINGING YOUR NEW BULL HOME

Consult with your veterinarian and draw up a policy for treating bulls on arrival and then annually. Bulls should be drenched to prevent introducing worms and, if necessary, should be treated for lice.

Plan to give follow-up vaccinations 4–6 weeks later. Leave the bulls in the yards for the next day or two on feed and water to allow them to settle down with other stock for company. A bull's behaviour will decide how quickly he can be moved out to paddocks.

MATING NEW YOUNG BULLS

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining. The older, dominant bull will not allow the young bulls to work, and will knock them around while keeping them away from the cows.

Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

When the young bulls are working, inspect them regularly and closely.

MATING NEW YOUNG BULLS

Older working bulls also need special care and attention before mating starts. They should be tested or checked every year for physical soundness, testicle tone, and serving capacity or ability.

All bulls to be used must be free-moving, active and in good condition. Working bulls may need supplementary feeding before the joining season to bring up condition.

DURING MATING

- Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.
- Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

NORTHERN AUSTRALIA

Although the Angus breed originated in a cooler climate, they can adapt to subtropical regions with many straight-bred and cross bred producers finding success in Northern Australia. Some of the following information may also be helpful for new bulls located in more temperate climates.

ADAPTATION

They key to Northern success for Angus is that cattle introduced from the Southern regions of Australia be allowed to adapt to their new environment before commencing their working life. If possible, a break of 3 months is advisable before you set your bull to work.

PURCHASE IN COOLER MONTHS

Ensure your bulls are in good condition before they do commence their working life. The cooler months are an ideal time to purchase and introduce Angus cattle, allowing them plenty of time to acclimatise.

CHANGE OF FEED SOURCE

When inducting Angus cattle into your herd consider their source of feed. Have you taken an animal which has been supplemented on grain straight to a dry pasture? Animals should be gradually changed over to their new feed to ensure they do not lose condition. This may involve using supplements which could include dry lick/urea blocks.

MANAGING CATTLE TICKS

For ticky areas, bulls should be vaccinated prior to transport and given another booster afterwards. Remember males are more susceptible to ticks than females.

Information is provided by the Department of Primary Industries NSW. For further information visit the DPI web site: www.dpi.nsw.gov.au. or www.angusaustralia.com.au. Further reading - Buying Angus Bulls

* The percentile bands represent the distribution of EBVs across the 2020 drop Australian Angus and Angus-influenced seedstock animals analysed in the Mid July 2022 TransTasman Angus Cattle Evaluation .

DISCLAIMER AND PRIVACY INFORMATION

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA.

SV : the sire has been verified by DNA.

DV : the dam has been verified by DNA.

: DNA verification has not been conducted.

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following idents.....

.....

from member.....(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Name: ..... Signature: .....

Date: .....

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email office@angusaustralia.com.au
