DROUGHTMASTERS

About *Valera Vale*

We are breeders of commercial Droughtmaster cattle underpinned by the genetics of our bull breeding operation. As such we are well aware of the profit drivers in the beef industry and realize that a functional breeder herd achieving high survival and calving rates is the main determinant of profitability in breeder and breeder/fattener enterprises. We don't waste selection pressure on anything that isn't related to dollars for a commercial operation.

High levels of breeder performance and environmental adaptation are intrinsically linked because only functional cows are able to maintain body condition to survive, lactate, cycle and fall pregnant in our too often challenging environment. Our cows are run under strictly commercial management conditions so that we can select the genetics that will be profitable for our commercial clients, and are expected to present a healthy calf for branding each year after a fourteen week joining period during which it may or may not rain.

The Bulls we offer you are the product of these efficient females. They are run on Buffel grass pastures under the same conditions as our steers, before silage preparation at Avilion, Greymare. Our aim is to safely prepare the bulls to an impressive but highly functional sale condition without compromising their current and future health. Valera Vale bulls are ready to work as soon as they're off the truck.

We do not believe in over-preparing our bulls and often face discrimination in the marketplace because of it. However, we continue to under prepare our bulls so they can over perform for our clients. As a result, Valera Vale bulls have a reputation for being able to adapt to any of the conditions experienced throughout Northern Australia. We do hear from clients that bulls grow too big but have never had them criticize them for being small.

We do not trim feet. Ever.

We guarantee our bulls in both the short and long term as will be attested by our long term clients. If one of our bulls does not perform to your standards, we need to know so that we can fix the problem.

We were late converts to the breeding of polled cattle, and did not see any problem with dehorning. Our clients began demanding polled bulls and we struggled to accommodate the demand using phenotypically polled and even DNA tested "homozygous poll" sires. We found the existing DNA tests to be very unreliable and they have only ever been presented as having a less than 100% probability of having the right result. With the development of more accurate SNP DNA test by Neogen we have been able to select for poll cattle more effectively and have had no further instances of horn calves from inaccurately identified "Polled" bulls. This has allowed us to produce large numbers of polled cattle without having to sacrifice selection for other traits. We are now convinced of the value of breeding polled cattle especially in light of the 2% extra mortality associated with dehorning recorded in the broadly based Cash Cow project.

We confidently predict that none of our PcPc bulls will produce a horned calf regardless of the horn status of the females. These PcPc bulls can dehorn a herd in one generation.

The Bulls will be Sperm Morphology tested, DNA 35K SNP recorded, Sire, Poll gene, Brahman and Pompes disease tested, have growth rate data on Grass and Silage and Dam history presented.

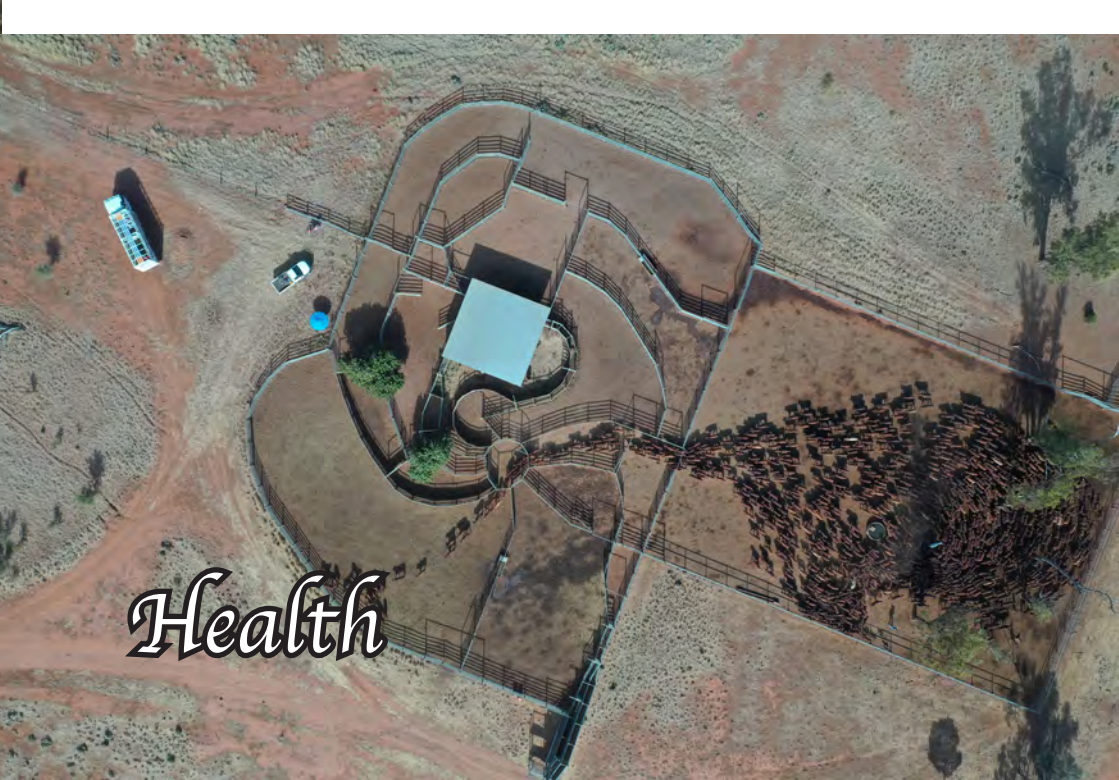

Our Philosophy

These heifers illustrate the style of animal we breed. After over 50 years of selection we have developed a type of Droughtmaster animal that is proven to handle our environment and has widespread market suitability (live export to MSA).

The core of our selection process is the ability to get in calf every year. The result of this philosophy is an animal with higher Brahman content than is currently fashionable (DNA Verified at around 66%), extremely reliable reproductive performance and quite high growth rates.

Research has proven that *Bos indicus* cattle have a significantly more efficient rumen than *Bos taurus* animals. This is important for the performance of our herd and our business. As recorded in the report of McLean and Blakeley (MLA Project Code B.NBP.0779) *Bos Indicus* cows weighing 550Kg and 6 months pregnant have the nutritional requirements of 1.12 Adult Equivalents whereas the same *Bos taurus* cow requires 1.24 AE. That 10% extra tucker is hard to find sometimes. We contend we have developed a highly adapted herd by indirect selection for a very efficient Rumen. Our cattle can survive, thrive, reproduce and grow well in the Northern Australian environment.

The Valera Vale herds are all BJD check tested. The herds have JBA 7 (WA) status so all buyers can make decisions with the confidence that these standards are being met.

The bulls have been comprehensively vaccinated against the 5 main Clostridial diseases, Leptospirosis, Vibriosis, Tick Fever, 3 Day Sickness and Botulism. They are tested free of Pestivirus persistent infection and the Genetic Pompes Disease. This inherited wasting disease is present in all Bos indicus and Bos Indicus derived breeds but is recessive so by pro-actively testing our bulls we can guarantee none of their progeny will develop Pompes disease regardless of the genetics of the breeders they are mated to.

The catalogue has had a Bull Breeding Soundness Evaluation (BBSE) to Australian Cattle Vets Assoc. standards by experienced and accredited cattle veterinarian Dr. Paul Vetter who will be further endorsing the Valera Vale bulls by buying at the sale. Paul and Margaret's "Cooladdi Park" have used Valera Vale bulls exclusively for decades.

The bulls' semen has been assessed both Crush Side (for live, motile) and in the Laboratory for normal Morphology. There is virtually no evidence that the crush side percentage has any bearing on the number calves a bull produces once the threshold of 30% alive and progressively motile sperm is exceeded. In fact, the variation in crush side percentage is more due to factors not associated with the bull such as collection technique, operator and recent sexual activity.

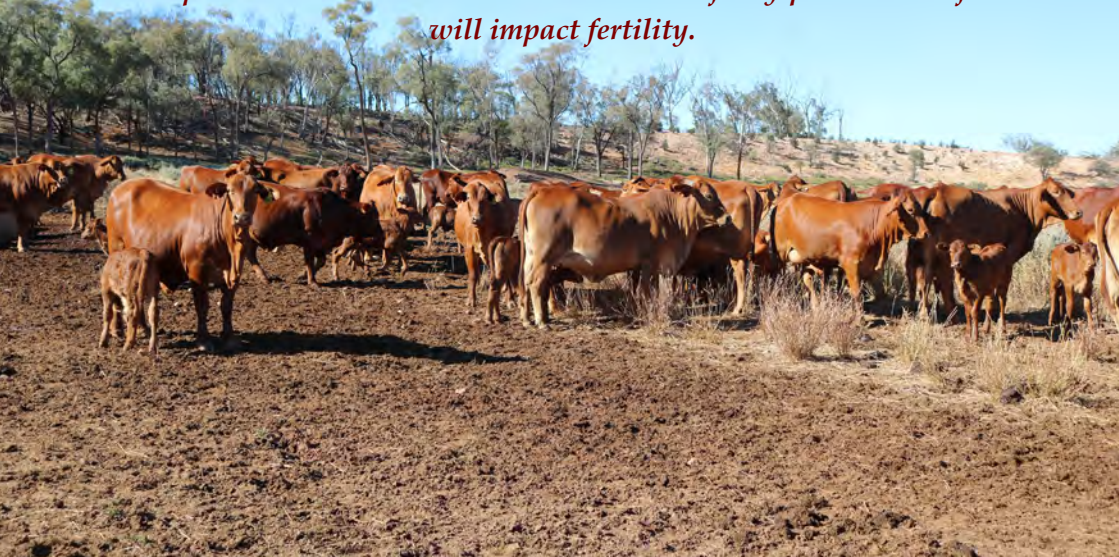

Morphology on the other hand is a more useful assessment as there is a well established association between the number of calves a bull can produce and %Normal sperm and a less well established association with the fertility of his daughters. Importantly, some bulls have consistently very high crush side percentages but have DNA defects which are only picked up by experts with special microscopes in a lab morphology test. These bulls may either be incapable of fertilizing an egg or may produce an embryo that is non-viable and is slipped well before calving. The magic morphology number is set at 50% for a useful bull. In the Bull Power research project, it was

demonstrated that while calf output was multi-factorial, all bulls that failed morphology (less than 50% Normal) performed poorly in terms of number of calves sired.

We believe on our results to date in the Valera Vale herds, we have achieved about 4% higher calving rates by using bulls with good sperm morphology than we were over the previous decades of records.

All the bulls presented in this catalogue have passed a morphology test i.e. they not only have achieved the threshold of 50% Normal Sperm but do not have excessive levels of any particular defect that will impact fertility.

Valera Vale is located between Augathella and Charleville in SW Qld. The homestead and Station Yards are 12 km up the formed gravel VALERAVALE ROAD which runs north west from the Mitchell Highway between Charleville with Augathella. The turnoff is just south of the Warrego River bridges approximately 37.1km from Augathella and 37.9k from the 100k sign from Charleville. There are daily air services by Qantas and Rex Aviation to Charleville from Brisbane. We will gladly meet any flights and arrange transport.

There is a 1000m grass/ gravel airstrip with windsock running
065/245 at the Homestead.

Co-ordinates: **25 59.05 S 146 23.76 E** Elevation 1115Ft

There are SWER powerlines between the Homestead and the 065 threshold

HOW TO REGISTER with

ELITE LIVESTOCK AUCTIONS

Simply go to www.elitelivestockauctions.com.au using your desktop, laptop, iPad, iPhone or android device.

Click on the **"Sign Up"** page / link

Create a bidding profile using the bidder registration page. *(You can either register as a livestock agent, company or private buyer)*

Agree to the Elite Livestock Auctions Terms & Conditions and the Selling Agents Sale Terms & Conditions as printed in the official Sale Catalogue

Click **"Register"**

You will then be notified by email that an account has been created.

Once an account has been created you are all **"Set to Bid"**

Each Auction can then be viewed by clicking **"Live Auction"** logo on the Elite Livestock Auctions website.

Once you receive email notification that your account has been created please go to the sale you wish to bid at and click **"Request to Bid"**

The sale will then approve your application to bid and on the sale catalogue you will see **"✓Bid Request Approved"**

On Sale day simply login, click **"Enter Auction"** on the catalogue page and you can start bidding. *(There is no need for software download)*

At the completion of the auction, invoicing will be carried out as per your registration details by the Selling Agents.

ALDINGA HUNDRED was the top priced bull at the Piggott Bull Sale in 2017. He is by Redskin Casper out of a cow by Oakmore Grantham. She had produced 6 calves in 6 years by 2017 with a calving interval of less than 12 months. Hundred is a higher content, very docile bull with great conformation and environmental adaptation. We have been very impressed by this bull's progeny and have retained sons to work in the stud.

ALDINGA IMPOSING was the equal top priced bull at the 2018 Piggott Bull sale. He was by Aldinga Davy Jones and had Medway and Yackatoon blood. He was an early maturing fleshy bull but broke down after 1 season so these will be his only calves. His dam, Aldinga Flaunty had had 3 calves in 3 years at the time of his purchase.

A L M A R A M S E S

was purchased as a weaner bull at the 2016 Alma Dispersal Sale. We were very impressed with his mother and tried to buy her as well but Inga Hayes (who had in depth knowledge of the Alma herd) had other ideas. He has noted sires Swan Merlin, Alma Kipper and Valley Cairo in his pedigree. He is a D5 bull. He has sustained a hindleg injury that will probably mean these are some of his last progeny.

AMAVALE BRADMAN

by Rocky View 714 and is a half brother to the grand champion droughtmaster bull at Beef 2021 (Farogan Valley Mojo). He produced very impressive high growth loose skinned individuals. He has been particularly influential as a producer of retained females and we have several very good sires by him. Bradman sired Valera Vale top priced bulls last year to Eversleigh/Wallace Vale and in 2017 to ED Cattle Co and the second top prices in 2017 to Fossil Downs and in 2018 to Barlyne stud and has a loyal following from repeat commercial bull buyers. Bradman is the sire of 15064M who has calves catalogued and we have selected another bull to retain by him from the '0 calves. We have used him in our ET and AI programs as well as naturally. He is 10 years old, still sound and being used in Kirstin

Wood's developing stud herd.

*B*BLUEGRASS JESTER

was a clean coated moderate framed but heavy bull with very good temperament. An early maturing type with a very flatback by our standards despite his Billabong heritage. He was by Billabong Norwood and has produced several retained sires and many good sale bulls as well as a swag of really efficient females.

BRYVONLEA SACHA

was by Skye Wilfred (a very successful sire purchased by the Hecks for \$50,000 at the 2014 DN sale). He died in his first season from unknown causes, so these are his first and last calves. He was a smooth coated higher content bull without excessive hump, and we are happy with the few progeny we have.

***B*Y-MINGO QUEBEC**

is a very promising tropically adapted bull by Hazelwood Pedro and has a pedigree with Billabong, Garthowen and Angle Zed bloodlines. He has a great muscle pattern, good structure and very loose skin that he throws in his progeny. We really like this bull and have collected semen already to use him more widely and have retained a son from the '0s to use in the herd.

C LONLARA 16110

by Vale View Todd and out of a Clonlara cow by Aldinga 07/47 who had produced 3 calves in 3 years at the time of his purchase. We were impressed with his high morphology results at time of sale, which he has consistently achieved throughout his breeding career. He is a big growthy bull who consistently produces calves that make the grade for the sale. We have also retained a sire by him to use in the herd. He unfortunately became ill last season and although he was in with cows at the time these may be his last calves.

EVERSLEIGH JUGGERNAUT

was the top priced bull at the 2017 Roma Droughtmaster sale. He has a pedigree featuring Clonlara, Garthowen, Redskin and Alma bloodlines. He is a heavily muscled, flatter backed bull that has thrown very good calves that appear to be able to hack the going out here. He developed a testicular abscess in his first year and it took a lot of effort and time to resolve so these are the first full season's calves. We wouldn't have gone to the trouble for a lesser bull as the prognosis was very poor.

GLEN FOSSLYN 451

was bought at the 2017 Glen Fosslyn sale and is an unregistered pure Droughtmaster. He is a higher content bull than the typical Glen Fosslyn animal and has proven to be a very resilient bull thriving through the droughts that have occurred pretty much through his whole life. He has produced retained sires and lots of sale bulls and a made a great contribution to the female herd. His progeny can't be registered.

HIGH COUNTRY GOOGLE

is by Glenlands Quarry out of a cow that had produced 6 calves at the time of his purchase. He was the second top priced bull at the 2018 High Country Sale. We were impressed by his muscle pattern, and large EMA at a young age. He represented a genetic outcross to some of our higher content cows.

HIGH COUNTRY GRENADIER

is by Billabong Winday (who weighs 1150Kg) and is a grandson of the noted sires Billabong Winchester, Kapalee Goldfinger and Wingfield Boris. He is a moderate framed bull with above average EBVs for growth and has a great temperament. He is out of Coes Creek Angel who produced 3 calves at the time of purchasing Grenadier.

HIGH COUNTRY GUNSMITH

by Billabong Winday (who weighs 1150Kg) is a paternal half-brother to Grenadier and has the great sires Billabong Winchester and Kapalee Goldfinger on the sire side. He is out of a cow from the highly proven Bumper stud from south of Mitchell who had produced 3 calves in 3 years at the time we purchased Gunsmith. Contrary to his recorded EBVs he is quite a big bull with a light tropically adapted coat and great temperament.

JASANDA BUNDY RUM

was purchased from the Scenic Rim Droughtmaster sale and his pedigree includes Billabong Godfrey, Cungelella Gladiator, Glenlands D Johnstone and Glenlands Invincible. He was culled after one season because he wouldn't stay in his paddock but having seen the results in those calves, we regret that decision. He was a tropically adapted loose skinned yellow bull.

LYNSEY PARK JAYDEN

is a moderate bull that has been a reliable producer of retained calves. An early maturing type, he has excellent temperament and is by Konjuli Golden-eye out of a half-sister to our super bull Lynsey Park Vernon. Jayden is a bull that maintains his condition well and produces very efficient females. He also consistently sires bull calves that make the grade for our auction drafts.

LYNSEY PARK VERNON

was a really outstanding big quiet bull that threw very uniform high quality quiet calves. One of our best ever bulls, he has had more positive influence on the Valera Vale herd than any other bull in the 50-year history of the stud. He is now dead, but we have 1,000 doses of his semen in the tank. Four sons are doing stud duty at Aldinga, Black Gully, High Country and Eversleigh/Wallace Vale studs and he is the sire of 7 bulls that have progeny in this catalogue. His daughters are characterised by great temperament and fertility. His semen is being used in Peter Johnstone's Repronomics research program and early reports indicate his heifers are performing.

M T CALLAN OWEN

was a double poll pink nosed red Brahman bull bought at the Brahman Week sale. We used him for a content boost for our Pilbara and Kimberley clients and have been very impressed with his progeny. We have retained several sons as sires including Valera Vale 17083M and Valera Vale 17089M who have progeny in this catalogue. His daughters have crossed back to Droughtmaster with very impressive results. Owen is ABBA registered but not DSBS registered so his progeny are not eligible for standard Droughtie registration.

N

NINDETHANA JEAN VALEAN

was the top priced bull at the 2018 Scenic Rim Droughtmaster sale. He is an AI son of the DN Top priced bull Calaanah Abraham (by Billabong Winchester) out of a very good, highly fertile Nindethana cow by Bryvonlea Malachi. He has impeccable temperament and despite a massive workload (successfully joined with nearly 200 cows in his first year) is always fat and shiny. He is a really remarkable bull producing exceptional calves.

TALGAI FERGUS

was by Skye Q21 and was a moderate, early maturing bull with very good structure (was still sound with very good morphology at 10 years old). He produced great calves with his faultless temperament, great structure and muscle pattern. Talgai Fergus was one of those bulls that was always fat regardless of seasonal conditions or his workload. He is the sire of 17361M and several other retained sires.

ALERA VALE GODFREY 414

was a docile big framed yellow bull by Jembrae Earl out of Valera Vale 06221F (by Durack Operator) who performed faultlessly throughout her breeding career. He was a later maturing bull and a bit extreme for frame score, but we considered him one of our leading bulls and have retained several sires by him. These are the last of his progeny.

ALERA VALE 15064M

is one of the best sons of Amavale Bradman but was sold last year to a commercial breeder because he wasn't homozygous poll. His dam was Valera Vale 06121F who was finally cast for age in 2020 at 14 years of age with a perfect reproductive record intact. A growthy, very highly adapted bull with unflappable temperament he was certainly an asset to the Valera Vale herd and leaves a legacy of great cattle. We have retained a PcPc son out of the 0's to replace him.

ALERA VALE 15128M

has been one of our top sires and is currently in with some of our elite cows at Rob and Libby Murphy's Logan Park at Tamrookum. We have used him by AI and Cooper Bischoff has used in him his IVF breeding program at CJB Droughtmasters. His semen is also being used in David Johnstone's Repronomics research program where he has produced 24 recorded progeny to date including two sets of twins. He is a particularly docile bull with a perfect sheath and great structure and muscle. He is 7 years old and we usually part with bulls at that age but he's going nowhere. His dam Valera Vale 10024F was cast for age at 11 years old without missing a calf.

ALERA VALE 16003M

is by Valera Vale Factor, a bull that has sired two of the Valera Vale sale toppers (2018 to High Country Droughtmasters and 2019 to the James Family of Hidden Valley Station, Katherine) and is now at High Country. His dam was Valera Vale 11355F who went missing at Valera Vale in 2019 at 9 years old had a faultless reproductive record until then. 16003M unfortunately died of a plant poisoning when moved to Argyle Lodge.

ALERA VALE 16095M

is one of about 30 retained sires by Lynsey Park Vernon. We don't have a photo but if you look at any of the other photos of Vernon bulls you will know what he looks like: they all look alike. His dam Valera Vale 13312F is 9 years old, still sound and has never missed a calf.

ALERA VALE 16101M

is another Lynsey Park Vernon calf.

He is a full brother to VV Kit Kat, Cooper Bischoff's show heifer and IVF donor. He is an outstanding bull and has been used widely in the herd. 101 is probably our pick of the Vernons so he's the cream of a very good crop. He is out of a No 3 cow (Valera Vale 13342F) that is still going strong and has a faultless reproductive record with 6 calves and a pregnancy. We intend to collect semen from him and include his dam in a planned IVF program later this year.

ALERA VALE 16107M

16107M is by Aldinga Deadly (by Hamadra Maverick out of a Billabong Mansfield cow) is not the prettiest bull in the bull paddock, but he certainly is a prolific producer of really good calves and has contributed many auction bulls over the last few years. His dam, Valera Vale 13336F is 9 years old and still sound and pregnant again after producing 6 calves in 6 years.

ALERA VALE 16197M

is another Lynsey Park Vernon calf out of Valera Vale 12281F. We don't have a photo but he's a Vernon so he's big, quiet and presentable. Valera Vale 12281F lost her No. 8 calf and was culled. She had reared 5 calves to that point having been joined as a yearling.

ALERA VALE 17055M

is another of Lynsey Park Vernons progeny. He is out of Valera Vale 12208F (by Shardale Esko) who produced 7 calves each year since being joined as a yearling and is still sound in the herd and pregnant again.

VALERA VALE 17070M

is by Lynsey Park Vernon out of Valera Vale 12253F. He is a typical Vernon. Valera Vale 12253F (by Valera Vale Bazza 151) was empty in 2019 and culled. She had successfully reared a calf each year for 6 years after being first joined as a yearling.

ALERA VALE 17071M

is another Lynsey Park Vernon calf. We don't have a photo and he died last year while running in a multi-sire herd apparently from a weed poisoning in the dry. He was out of Valera Vale 12250F (Valera Vale, Hamadra and Balcara blood) who is still in the herd having produced 7 calves in 7 years and is pregnant again.

ALERA VALE 17074M

is another Lynsey Park Vernon calf. He is out of a great old cow in Valera Vale 10052F (Valera Vale, Minlacowie and Clonlara bloodlines) who was cast for age last year after rearing 8 calves in 8 years. She was one of Michael's favourites with a moderate to large frame with soft loose hide and a soft temperament.

ALERA VALE 17083

is a very impressive darker coloured, higher content docile bull by the Brahman, Mt Callan Owen. He displays great temperament and is Robert's favourite bull. He has been widely used in the herd to breed an alternative to pure Brahman combining pollness, reliable temperament and extra fertility with the adaptation of Brahman. The progeny are not directly eligible for registration. His dam, Valera Vale 11153F went missing in 2020 but had produced 7 calves in 7 years.

ALERA VALE 17089M

is a very impressive higher content, very docile bull by the Brahman, Mt Callan Owen. These bulls are used to produce an alternative to pure Brahmans, combining the adaptability of the brahmans with pollness, better fertility and a more relaxed temperament. While we are very impressed by his progeny, they are not directly eligible for registration. His dam Valera Vale 11162F is still in the herd and pregnant with her 8th calf in 8 years.

ALERA VALE 17105M

is by the Brahman, Mt Callan Owen. Out of Valera Vale 11130F who has produced 8 calves in 8 years and is pregnant again. He was purchased by David Kassulke at our 2018 sale. When we set up the co-operator breeder herd at Bromelton we decided to keep using him.

VALERA VALE 17298M

is by Valera Vale 14326M (by Skye Tally: Wingfield Cagney and Redskin bloodlines) and is quite a big bull with good fleshing and higher content. He is out of Valera Vale 14269F. He was her first calf but has since recorded 5 weaned calves and a pregnancy. She is mainly straight Valera Vale blood.

ALERA VALE 17306M

is by Valera Vale 14073M (By the very good bull, Valera Vale Bazza 151) and is a long, growthy easy doing bullock breeder's style of bull. He was the first calf of Valera Vale 14263F who weaned 3 calves before being culled after failing to rear a calf. Dingos have been a serious problem at Valera Vale prior to the exclusion fence.

VALERA VALE 17315M

a paternal half brother to Valera vale 17298M being by Valera Vale 14326M (by Skye Tally: Wingfield Cagney and Redskin bloodlines). Out of 14460F who is still in the herd and has never missed a calf. He is a higher content bull and carries a gyr mark from his Brahman heritage. He is a very prolific producer of top notch calves in multi-sire joinings. We are currently using him in the Argyle Lodge herd.

ALERA VALE 17361M

By the prolific Talgai Fergus, we don't have a photograph but he is a similar type to his sire. A moderate maturer with excellent fleshing and temperament. His dam is Valera Vale 12076F who produced 6 calves in 6 years before being culled as empty.

ALERA VALE 17410M

(registered as Valera Vale Krypton) is sired by Valera Vale Goliath 126 (Valera Vale, Hamadra and Balcara blood) out of Valera Vale 12075F who is nearly straight Valera Vale blood. His Dam has produced 8 calves in 8 years (joined as a yearling) and is currently pregnant with what will probably be her last calf. He is a really useful bull combining structure, fleshing and growth and is a prolific producer of good calves in the multiple herds. We have retained 3 sons out of this first drop to use in the stud. 17410M has had his genome mapped as part of a UQ research product searching for a scurr gene: He is PcPc but has scurrs.

Registration with Droughtmaster Australia

The Flynn family have been breeding Droughtmasters since 1969. The Valera Vale Droughtmaster herd numbers over 6,000 animals including those run on co-operator herds owned by AJ Bush and Sons and David Kassulke at "Argyle Lodge", Beaudesert and by John and Nikki Cleary on "Avilion", Greymare.

The herd is mainly pure Droughtmaster but there has been some infusion of extra Brahman blood in recent times. When making the decision to buy outside bulls, we select on type, temperament and data, and in some cases the best bull for us in the yard is unregistered. As such we have bought and used unregistered pure Droughtmaster bulls from sales such as Glen Fosslyn and Clonlara. We also lack reliable pedigree data on some cows. Because of this some of the bulls catalogued in the sale cannot be registered with the Breed Society through the conventional system and these are identified against the catalogue lots.

Eligibility for entry into Western Australia

The stud enterprise operates over 4 PIC numbers in 3 shires. Due to the most recent changes regarding BJD testing for WA entry we are restricted to our original two PICs to supply bulls to WA.

Our two co-operator breeders destocked their properties and restocked with Valera Vale cows and adopted all Valera Vale management programs. As a result, neither PIC has any 'homebred' cattle over the age of 3 to comply with the testing requirements, even though the cattle now stocking these properties were all bred on the two original, WA eligible PICs and have been included in our WA eligibility testing programs until they shifted. Our current management system involves weaning the calves from the SEQ properties onto trucks and growing them out at "Valera Vale", under the same conditions as our cattle are always raised. Despite representation to the WA authorities we cannot at this stage accredit these properties for WA, despite the fact that the cows themselves are WA eligible...

The eligibility of the individual lots to move into WA is detailed in the catalogue.

*As usual Valera Vale offers **Free Delivery** to the nearest major centre in QLD (including Mt Isa, Charters Towers, Birdsville and South East Qld) on all bulls purchased at the sale.*

*For buyers outside QLD as an alternative to free delivery, **bulls travelling to WA or NT will receive \$250 and to NSW \$150 per bull Freight Rebate** to assist with their trip home. Please ensure delivery instructions are as clear as possible as outside carriers may be used.*

Bulls can be inspected at Avilion, Greymare prior to Monday the 20th of September, or at Valera Vale from 21st of September until sale day. Clients not able to travel west to Valera Vale can choose their bulls at Avilion or by reviewing the data and pre-recorded individual lot videos.

The sale will be livestreamed (video and audio) on the elite livestock platform allowing clients to make their purchases without leaving home, and the bulls will be delivered to them after the sale at no charge.

Bulls are the purchaser's risk from the fall of the hammer and insurance is recommended.
